Overview
The continuation of conflict in Northeast Nigeria has created a complex humanitarian crisis, rendering sections of Borno state as hard to reach. To address information gaps facing the humanitarian response in Northeast Nigeria and inform humanitarian actors on the demographics of households in hard-to-reach areas of Northeast Nigeria, as well as to identify their needs, access to services and movement intentions, REACH has been conducting a monthly assessment of hard-to-reach areas in Northeast Nigeria since November 2018.

Using its Area of Knowledge (AoK) methodology, REACH remotely monitors the situation in hard-to-reach areas through monthly multi-sector interviews in accessible Local Government Area (LGA) capitals with the following typology of Key Informants (KIs):
- KIs who are newly arrived internally displaced persons (IDPs) who have left a hard-to-reach settlement in the last 3 months
- KIs who have had contact with someone living or having been in a hard-to-reach settlement in the last month (traders, migrants, family members, etc.)

Selected KIs are purposively sampled and are interviewed on settlement-wide circumstances in hard-to-reach areas, rather than their individual experiences. Responses from KIs reporting on the same settlement are then aggregated to the settlement level. The most common response provided by the greatest number of KIs is reported for each settlement. When no most common response could be identified, the response is considered as ‘no consensus’. While included in the calculations, the percentage of settlements for which no consensus was reached is not displayed in the results below.

Results presented in this factsheet, unless otherwise specified, represent the proportion of settlements assessed within a LGA. Findings are only reported on LGAs where at least 5% of populated settlements in the respective LGA have been assessed.

The findings presented are indicative of broader trends in assessed settlements in January 2020, and are not statistically generalisable.

Assessment Coverage
- 343 Key Informants interviewed
- 160 Settlements assessed
- 8 LGAs assessed
- 4 LGAs with 5% or more coverage

Assessment coverage
Proportion of settlements assessed:

Access to health services
Proportion of assessed settlements reporting a functional health service that the population could walk to:

Most common health problems reported by assessed settlements:

<table>
<thead>
<tr>
<th>Health Problem</th>
<th>Proportion</th>
</tr>
</thead>
<tbody>
<tr>
<td>Malaria or Fever</td>
<td>56%</td>
</tr>
<tr>
<td>Skin infections</td>
<td>7%</td>
</tr>
<tr>
<td>Water borne diseases</td>
<td>4%</td>
</tr>
<tr>
<td>Stomach pains</td>
<td>4%</td>
</tr>
<tr>
<td>No common health problems</td>
<td>4%</td>
</tr>
<tr>
<td>Other</td>
<td>7%</td>
</tr>
</tbody>
</table>

83% of assessed settlements with no access to a functional health service (88%) reported that the main barrier to accessing health services is that they are either destroyed or never existed.

6% of assessed settlements reported having access to feeding programmes that provide plumpy sup, CSB++ or other nutrition items.
