Communicable Disease Vulnerability Score District Profile
Yemen IDP Hosting Sites

District: Shara’b As Salam  Governorate: Taizz

April 2020

Methodology

To inform prioritization of preparedness and response in Yemen in terms of communicable diseases including COVID-19, this profile summarizes key risk indicators per district in Yemen as a result of the existence of IDP sites/camps. Since many of these sites lack essential services and are home to large numbers of vulnerable people, communicable diseases are a recurring threat. This profile is an overview of Shara’b As Salam district.

Indicators were weighted to determine a district-level Communicable Disease Vulnerability Score for IDP populations living in sites. The Score has been designed in collaboration with the CCCM Cluster and with expert input from the Health and Water, Sanitation, and Hygiene (WASH) Clusters.

All information is for humanitarian use only.

For more information on the methodology, please refer to the methodology note.

District Overview

# of sites (Site Reporting): 1
# of sites (IDP Hosting Sites Master List): 2
Total IDP population (Site Reporting): 75
Total IDP population (IDP Hosting Sites Master List): 75
Total district population: 160,987

Vulnerable Groups

# of sites with elderly populations (60+): 1

Cholera and GAM Indicators

Cholera
District-level attack rate of suspected cholera cases or acute watery diarrhoea per 10,000 population
40.38

GAM
District-level rate of GAM
15%
