To inform prioritization of preparedness and response in Yemen in terms of communicable diseases including COVID-19, this profile summarizes key risk indicators per district in Yemen as a result of the existence of IDP sites/camps. Since many of these sites lack essential services and are home to large numbers of vulnerable people, communicable diseases are a recurring threat. This profile is an overview of Mawza district.

Indicators were weighted to determine a district-level Communicable Disease Vulnerability Score for IDP populations living in sites. The Score has been designed in collaboration with the CCCM Cluster and with expert input from the Health and Water, Sanitation, and Hygiene (WASH) Clusters.*

All information is for humanitarian use only.

For more information on the methodology, please refer to the methodology note.

District-level CCCM Communicable Disease Vulnerability Score: 5 (Severe Vulnerability)

District: Mawza Governorate: Taizz

**Methodology**

Cholera and GAM Indicators

<table>
<thead>
<tr>
<th>Cholera</th>
<th>District-level attack rate of suspected cholera cases or acute watery diarrhoea per 10,000 population</th>
<th>Score</th>
</tr>
</thead>
<tbody>
<tr>

<td>38.2</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>GAM</th>
<th>District-level rate of GAM</th>
<th>Score</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>18%</td>
<td></td>
</tr>
</tbody>
</table>

2 OCHA population figures - 2019 projections.
3 As per Sphere Standards.
4 The Communicable Disease Vulnerability Score per district is calculated by taking a weighted average of the severity scores for each indicator and is determined using a seven-point scale.
5 See Methodology Note.
6 0 (Minimal Vulnerability), 1 (Minor Vulnerability), 2 (Moderate Vulnerability), 3 (Significant Vulnerability), 4 (Major Vulnerability), 5 (Severe Vulnerability), 6 (Critical Vulnerability).
7 Illegal connection to piped network, unprotected rainwater tank/well/spring, borehole.
