

REACH conducted a review of local architecture in Afghanistan in November 2020, including building and maintenance practices, shelter and material choice, and environment and social influences on plot arrangement. As part of this assessment, with the support of UNOSAT, REACH conducted a satellite imagery analysis of different shelter types and their plot arrangements in both rural and urban contexts across all 7 regions of Afghanistan. Using remote sensing, different shelter types were identified and their plot arrangements and positioning of shelters were outlined, in order to provide clear examples of how households position their shelters across different regions and shelters in Afghanistan. All imagery and analysis was conducted in January and February 2020."

Description
Collapsible tents made of woven goat hair panels, sometimes supported by woven reed mat walls. They are commonly used among nomadic peoples (kuchi).
Canvas tents are pre-manufactured or made by stitching pieces of cloth together and supported with poles.
Mobile shelters made of woven reed or tamarisk mats held by poles.
Permanent shelters made of packed mud or bricks. The roof of the shelter is made of brick and is shaped like a dome or arch.
Permanent shelter with mud, brick, or stone walls, and wood -supported flat roofs. These shelters are constructed with stone, timber, bricks, pakhsa, or a combination thereof.
Permanent shelter made from a natural void in the side of a hill, mountain, or cliff-face.
