Communicable Disease Vulnerability Score District Profile
Yemen IDP Hosting Sites

District: Amd Governorate: Hadramaut
April 2020

Methodology

To inform prioritization of preparedness and response in Yemen in terms of communicable diseases including COVID-19, this profile summarizes key risk indicators per district in Yemen as a result of the existence of IDP sites/camps. Since many of these sites lack essential services and are home to large numbers of vulnerable people, communicable diseases are a recurring threat. This profile is an overview of Amd district.

Indicators were weighted to determine a district-level Communicable Disease Vulnerability Score for IDP populations living in sites. The Score has been designed in collaboration with the CCCM Cluster and with expert input from the Health and Water, Sanitation, and Hygiene (WASH) Clusters.*

All information is for humanitarian use only.

District Overview

# of sites (Site Reporting): 1
# of sites (IDP Hosting Sites Master List): NA
Total IDP population (Site Reporting): 581
Total IDP population (IDP Hosting Sites Master List): NA
Total district population: 30,400

Vulnerable Groups

# of sites with elderly populations (60+): 0/1
# of sites with persons with chronic diseases: 0/1

District-level CCCM Communicable Disease Vulnerability Score: 0 (Minimal Vulnerability)

CCCM Communicable Disease Vulnerability Score Indicators

| Vulnerable groups | % of sites with presence of elderly populations (60+) | 0% |
| Threats to sites | % of IDPs living in sites where infectious diseases were reported as a threat | 0% |
| Critical service gap | % of IDPs living in sites reporting use of unsafe and/or unprotected water sources | 0% |
| Priority needs | % of IDPs living in sites reporting water and sanitation services as priority needs | 0% |

Cholera and GAM Indicators

| Cholera | District-level attack rate of suspected cholera cases or acute watery diarrhoea per 10,000 population | 0 |
| GAM | District-level rate of GAM | 9% |

*For more information on the methodology, please refer to the methodology note.

2 OCHA population figures - 2019 projections.
3 As per Sphere Standards
4 The Communicable Disease Vulnerability Score per district is calculated by taking a weighted average of the severity scores for each indicator and is determined using a seven-point scale.
5 See Methodology Note
6 Illegal connection to piped network, unprotected rainwater tank/well/spring, borehole.

For more information on the methodology, please refer to the methodology note.
