

Emergency Response Mechanism

Funded by the European Commission's Humanitarian Aid Department (ECHO), the Emergency Response Mechanism (ERM) was established in 2011 as a response to emergencies triggered by ongoing conflict or sudden-onset natural disasters. The ERM programme aims to ensure that a network of aid organisations with operations across Afghanistan have resources (staff, cash reserves and stockpiles of goods) to rapidly and directly respond to localised crises in a coordinated, timely and principled manner. The partners have experience working in Afghanistan and adhere to the humanitarian principles of humanity, neutrality, impartiality, independence and transparency. During the funding phase of ERM 7 (2017-2018) the programme was implemented by seven operational partners covering different regions within Afghanistan. REACH supported ERM 7 partners by providing joint information management, managing and analysing Post-Distribution Monitoring, market survey and Household Emergency Assessment Tool (for rapid beneficiary selection) needs assessment data.

Methodology

All partners work with a common methodology, tools and time frame:

Event notification / referral of displaced population through Department of Refugees and Repatriation

HEAT needs and market assessment:
Within 5 days after referral

Dissemination of assessment report:
Within 2 days after finalisation of assessment

Multi purpose cash and WASH intervention:
Only HHs displaced within the last 6 months are eligible for assistance

Post distribution monitoring:
Carried out 2 month after intervention

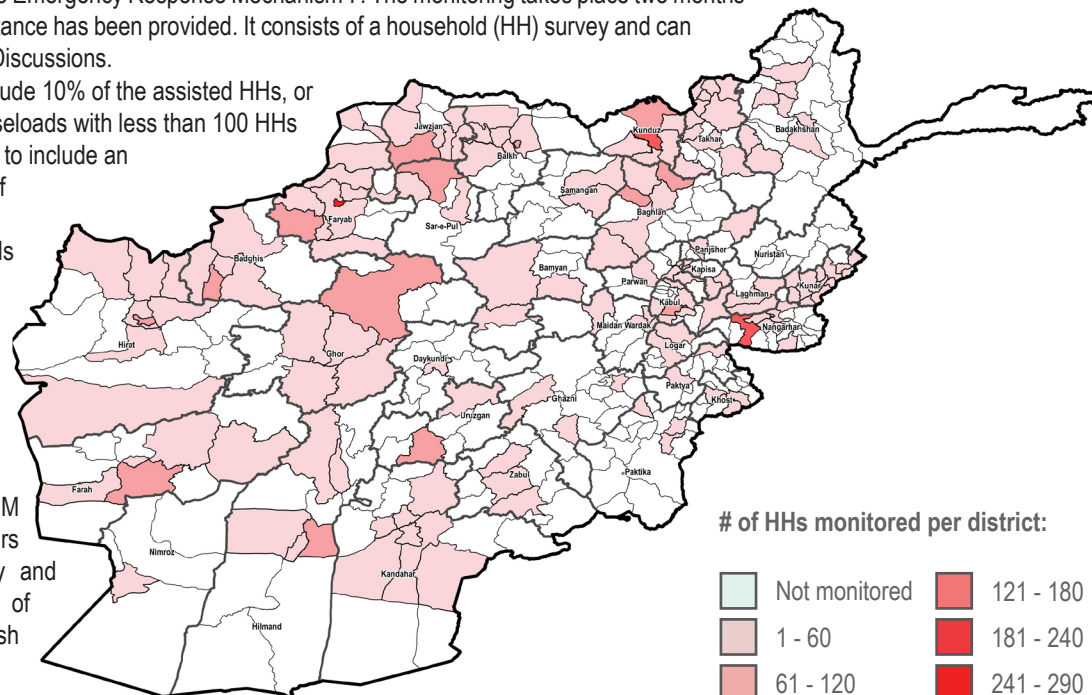

ERM Post Distribution Monitoring

The ERM partners have committed themselves to carry out Post-Distribution Monitoring (PDM) according to standards defined in the common rational for the Emergency Response Mechanism 7. The monitoring takes place two months after emergency assistance has been provided. It consists of a household (HH) survey and can include Focus Group Discussions.

The survey should include 10% of the assisted HHs, or at least 10 HHs for caseloads with less than 100 HHs assisted. It should aim to include an

equal representation of men and women, especially for caseloads over 100 HHs. ERM partners are using for the HH survey the common PDM questionnaire of the Cash and Voucher Working Group.

The findings of the PDM allows the ERM partners to assess the quality and short-term outcomes of the multi-purpose cash assistance.

Number of HHs monitored per month:

Gender of respondents to PDM survey:

Please note that the gender of the respondent does not always correspond with the gender of the HH head.

23% Female
77% Male

Post distribution monitoring (PDM) is carried out according to standards defined in the common rational for the Emergency Response Mechanism 7. Monitoring takes place two months after emergency assistance has been provided. Ten percent (10%) of the assisted households (or at least ten households) are monitored to assess the short term outcomes of the multi purpose cash assistance. In Afghanistan, a total of 576 PDMs have been carried out between August 2017 and April 2018.

Demographics

Total number of households (HHs) monitored: 5,067
Average number of families per HH: 1.19
Average HH size: 6.63

Proportion of HHs with additional vulnerabilities:

Chronically ill member 28%
Physically disabled member 16%
Child headed (under 18 years) 3%
Female headed 38%
Elderly headed (over 60 years) 28%

¹ Food-based coping strategy index is calculated by multiplying coping strategy use by number of days used in the last seven. Consumption score is the calculation of food groups eaten in the last seven days. Food security index is the triangulation of these two scores.

Post distribution monitoring (PDM) is carried out according to standards defined in the common rational for the Emergency Response Mechanism 7. Monitoring takes place two months after emergency assistance has been provided. Ten percent (10%) of the assisted households (or at least ten households) are monitored to assess the short term outcomes of the multi purpose cash assistance. In Daykundi province a total of 4 PDMs have been carried out between August 2017 and April 2018.

¹ Food-based coping strategy index is calculated by multiplying coping strategy use by number of days used in the last seven. Consumption score is the calculation of food groups eaten in the last seven days. Food security index is the triangulation of these two scores.

Post distribution monitoring (PDM) is carried out according to standards defined in the common rational for the Emergency Response Mechanism 7. Monitoring takes place two months after emergency assistance has been provided. Ten percent (10%) of the assisted households (or at least ten households) are monitored to assess the short term outcomes of the multi purpose cash assistance. In Hilmand province a total of 11 PDMs have been carried out between August 2017 and April 2018.

Demographics

Total number of households (HHs) monitored: 193
Average number of families per HH: 1.03
Average HH size: 7.12

Proportion of HHs with additional vulnerabilities:

Chronically ill member 2% 
Physically disabled member 3% 
Child headed (under 18 years) 0%
Female headed 88% 
Elderly headed (over 60 years) 7%

¹ Food-based coping strategy index is calculated by multiplying coping strategy use by number of days used in the last seven. Consumption score is the calculation of food groups eaten in the last seven days. Food security index is the triangulation of these two scores.

Post distribution monitoring (PDM) is carried out according to standards defined in the common rational for the Emergency Response Mechanism 7. Monitoring takes place two months after emergency assistance has been provided. Ten percent (10%) of the assisted households (or at least ten households) are monitored to assess the short term outcomes of the multi purpose cash assistance. In Khost province a total of 24 PDMs have been carried out between August 2017 and April 2018.

Overall	80%	9%	9%	2%	36%	42%	7%	13%	1%	42%	2%	2%	29%

¹ Food-based coping strategy index is calculated by multiplying coping strategy use by number of days used in the last seven. Consumption score is the calculation of food groups eaten in the last seven days. Food security index is the triangulation of these two scores.

Post distribution monitoring (PDM) is carried out according to standards defined in the common rational for the Emergency Response Mechanism 7. Monitoring takes place two months after emergency assistance has been provided. Ten percent (10%) of the assisted households (or at least ten households) are monitored to assess the short term outcomes of the multi purpose cash assistance.

In Nangarhar province a total of 38 PDMs have been carried out between August 2017 and April 2018.

Demographics

Total number of households (HHs) monitored: 417
Average number of families per HH: 1.55
Average HH size: 7.53

Proportion of HHs with additional vulnerabilities:

Chronically ill member 43%
Physically disabled member 22%
Child headed (under 18 years) 1%
Female headed 22%
Elderly headed (over 60 years) 17%

¹ Food-based coping strategy index is calculated by multiplying coping strategy use by number of days used in the last seven. Consumption score is the calculation of food groups eaten in the last seven days. Food security index is the triangulation of these two scores.

Post distribution monitoring (PDM) is carried out according to standards defined in the common rational for the Emergency Response Mechanism 7. Monitoring takes place two months after emergency assistance has been provided. Ten percent (10%) of the assisted households (or at least ten households) are monitored to assess the short term outcomes of the multi purpose cash assistance. In Samangan province a total of 7 PDMs have been carried out between August 2017 and April 2018.
