

Background

Over the past six months, changing areas of influence and economic instability have shaped the context for displacement in Ar-Raqqa, Deir-ez-Zor, and Menbij. In October 2019, increased military activity in Ar-Raqqa and Al-Hasakeh governorates led to mass displacement (including the closure of two camps for internally displaced persons (IDPs)) and a disruption of the strategic M4 highway.¹ Forced recruitment by armed forces has also reportedly been a driver of displacement in some areas.²

January 2020 brought the expiration of the United Nations (UN) Cross Border Resolution for Syria. While the resolution was extended for six months, several border crossings in northeast Syria (NES) lost authorisation, cutting off key routes for UN aid to come into NES.³

In the six months prior to data collection, economic conditions deteriorated in NES, and the prices of basic goods increased markedly. This was partially due to the instability and decline of the Syrian Pound (SYP) against the US Dollar as well as the escalation of conflict in northwest Syria in early 2020.⁴

At the time of data collection in mid-June, there had been five confirmed COVID-19 cases and one death in NES.⁵ At the time of writing, however, a reported spike in infections has led to a cumulative 204 cases and 9 deaths.⁶ Those living in informal settlements and collective centres in NES have been highlighted as a particular concern.⁷ For key findings on COVID-19, please see page 3.

Assessment Overview

Coverage

Assessed settlements:	165
Population in assessed settlements:	80,450
Settlements with population over 1,000:	25
Collective centres:	57

Methodology

REACH's informal settlement profiling in NES consists of key informant (KI) interviews with community members who have knowledge of settlements. One to two KIs were sought for each of the informal settlements and collective centres verified by the NES Sites and Settlements Working Group (SSWG).^{8,9}

Data collection took place between 15–24 June 2020 through remote (phone) interviews. In total, 165 sites were assessed in 14 sub-districts in Deir-ez-Zor, Raqqa and Aleppo governorates. This document highlights COVID-19 vulnerabilities such as susceptible groups, water, sanitation and hygiene (WASH) and health capacities and needs. The full data set can be found [here](#).

Due to the KI methodology used, findings are not statistically representative and should only be considered as indicative of the situation. The assessment was carried out at the settlement level and data is relevant only for the assessed settlements and not the communities they are in or near.

As part of this assessment, data was also collected in Al-Hasakeh sub-district, the findings of which are available [here](#). These assessments follow a previous assessment of informal settlements in NES in April 2020 – this set of profiles can be found [here](#).

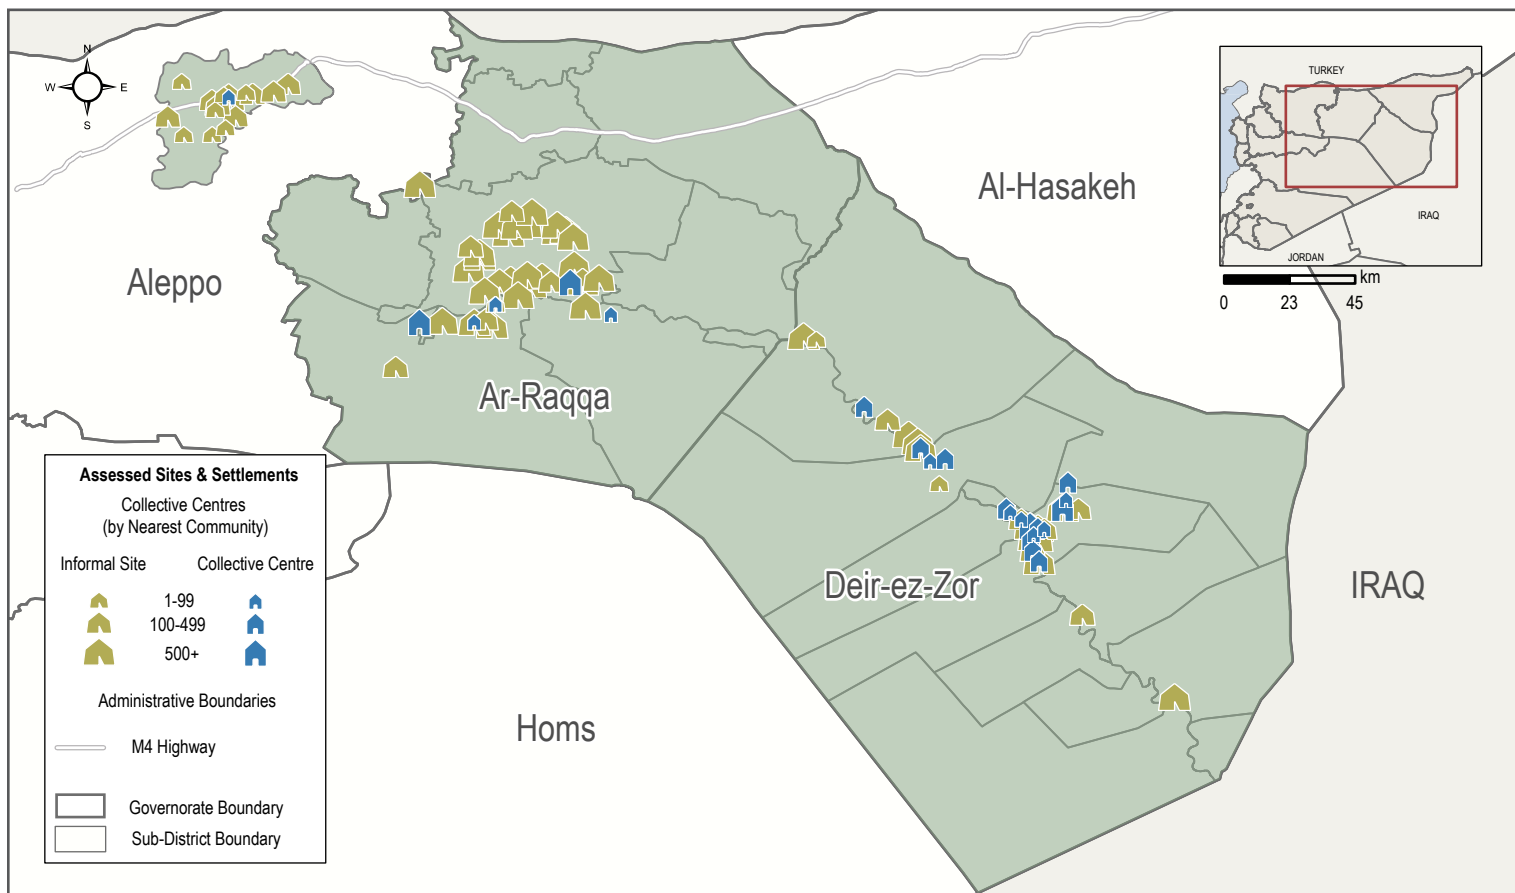

Participate in our 2020 User Survey

REACH is conducting a quick 15 question [survey](#) to receive your feedback on REACH Syria assessments and information products. Your inputs will enable us to improve our work and maximize the usefulness for actors working in the Syria response. The survey is anonymous and can be accessed until the 22nd of October 2020. The survey should only take 5-10 minutes to complete. REACH thank you for your valuable feedback.

Locations of Assessed Settlements

Informal Site and Settlement Profiles

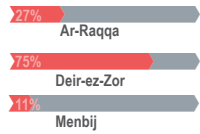

Ar-Raqqa, Deir-ez-Zor, and Menbij, Syria

June 2020

Key Findings

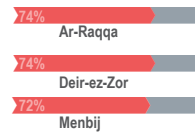

WASH:

Reported % of assessed settlements with drinking water quality issues

In 31% of assessed settlements in Deir-ez-Zor, KIs reported half or fewer residents had enough water to meet their daily needs (Ar-Raqqa 25%, Menbij 11%). Reportedly, no latrines were available at 100% of assessed settlements in Menbij (Ar-Raqqa 6%, Deir-ez-Zor 12%).

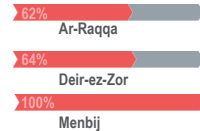

Health:

Reported % of assessed settlements with access to medicine to treat chronic illnesses

In Menbij, 28% of assessed settlements had no access to a health facility, compared to 25% in Deir-ez-Zor and 15% in Ar-Raqqa. No medicine for chronic illness (either free or paid) was available in 28% of assessed settlements in Menbij and 26% in Ar-Raqqa and Deir-ez-Zor.

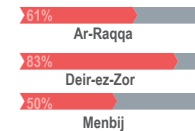

CCCM:

% of assessed settlements reportedly receiving aid distributions in the 30 days prior to data collection

KIs reported all assessed settlements in Menbij had received an aid distribution in the 30 days prior to data collection, compared to 62% in Ar-Raqqa and 64% in Deir-ez-Zor. The most frequently reported information need in all areas was how to find job opportunities.

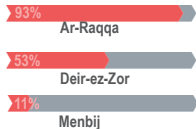

Food Security:

% of assessed settlements that reported food as a priority need

KIs reported that residents did not have enough food in 74% of assessed settlements in Deir-ez-Zor, 70% in Ar-Raqqa and 83% in Menbij. Food was reported as a priority need for 50% of settlements in Menbij, 61% in Ar-Raqqa and 83% in Deir-ez-Zor.

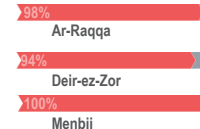

Education:

Reported % of assessed settlements with access to education reported

Education services were reportedly accessible for 93% of assessed settlements in Deir-ez-Zor, but only 53% in Ar-Raqqa and 11% in Menbij. In June, education services in NES communities were only partially available due to COVID-19.¹⁰

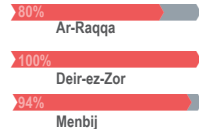

Livelihoods:

% of assessed settlements where residents are using money borrowing as a livelihoods coping strategy

Residents in 23% of assessed settlements in Deir-ez-Zor were reportedly without access to income (Ar-Raqqa 14%, Menbij 22%). Employment was reported as a priority need in 44% of Menbij settlements, 54% in Deir-ez-Zor and 67% in Raqqa.

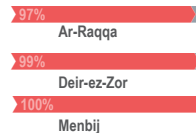

Protection:

% of assessed settlements where child labour was reported

Child labour was reported in 100% of assessed settlements in Deir-ez-Zor, 94% in Menbij and 80% in Raqqa. Early marriage (below the age of 16) was also reported in 70% of assessed settlements in Deir-ez-Zor (Raqqa 20%, Menbij 33%).

Shelter:

% of assessed settlements where shelter inadequacies were reported

Shelter inadequacies^a were reported in 97% of assessed settlements in Ar-Raqqa. In Deir-ez-Zor, shelter inadequacies were reported in 99% of assessed settlements. In Menbij, 100% of locations experienced shelter inadequacies.

^aE.g. excess heat inside dwelling, shelter unable to be locked, no lights outside dwelling.

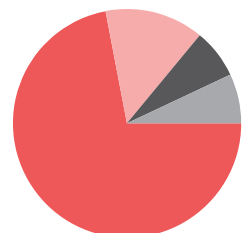

Possible Informal Sites or Camps

Settlement name	SSWG code	Sub-district	Est. no. of IDPs
Western Alshabeya camp	SS06 4687	Moezleh	5820
Al Hukumi camp	SS06 4640	Moezleh	4500
Al Fteeh camp	SS06 4649	Moezleh	2750
Al Wahdaa	SS06 4638	Moezleh	2730
Westren Hzema	SS06 4650	Moezleh	2700
Eastern Alshabeya camp	SS06 4707	Moezleh	2424
Bo Hameed 1 Lower Safira camp	SS13 4787	Mhemideh	2200
Alrijm Alabed camp	SS06 4693	Moezleh	2000
Al Khaiyalah camp	SS06 4647	Moezleh	2000
Alsalam	SS06 4688	Moezleh	2000
Bo Hameed Makbara camp	SS13 4783	Mhemideh	1800
South Masakn Alshrta	SS06 4685	Moezleh	1600
Hajin Informal Site	SS10 4681	Hajin	1575
Alhraqat	SS14 4822	Sweidik	1500

Of the 25 assessed settlements with populations over 1,000, 17 were in Ar-Raqqa governorate and 8 in Deir-ez-Zor. Presence of camp management is not known for these locations, but the 15 largest are highlighted here as potential informal sites.

Geographic distribution of potential informal sites by sub-district

Moezleh 72%
Mhemideh 14%
Hajin 7%
Sweidik 7%

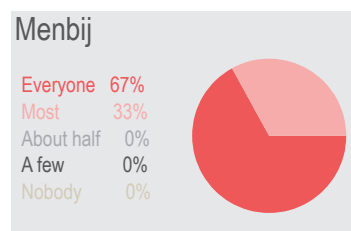

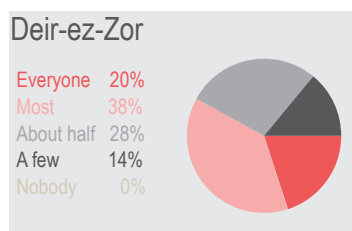

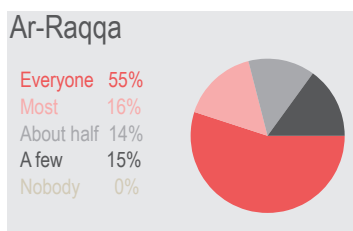

Key Findings - COVID-19 Vulnerability

The findings presented on this page highlight indicators that are relevant to assessing settlements' vulnerability to COVID-19 and ability to seek treatment. Evidence on the spread of COVID-19 to date suggests that elderly populations are more vulnerable to the disease, with a significantly higher fatality rate among over-60s.¹¹ Access to health facilities indicates how available medical care is in case of illness. Similarly, the availability of medicine to treat chronic illnesses may be indicative of medicine availability more generally and may determine whether residents with chronic health problems can access appropriate treatment.

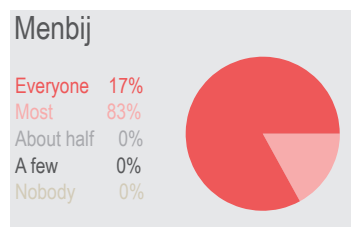

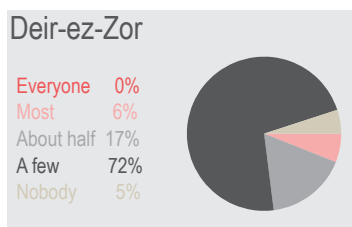

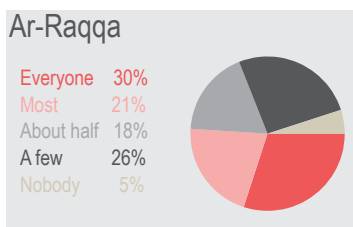

Handwashing with soap has been promoted as an effective way to kill the virus and limit its spread.¹² However, use of this prevention method is only possible where populations have access to sufficient water to meet all their needs. Physical distancing has also been widely promoted as a prevention measure;¹² the prevalence of communal latrines and other shared facilities indicate that physical distancing may not be possible in all locations. Likewise, lack of bathing facilities indicates barriers to sanitation practices which could reduce the risk of infection.

Notes on figures: % represent the percentage of assessed settlements within each governorate in which KIs reported a given behaviour or issue.

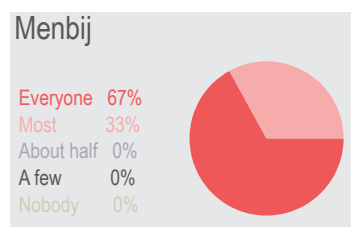

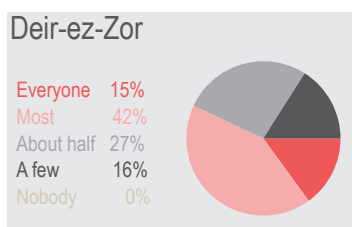

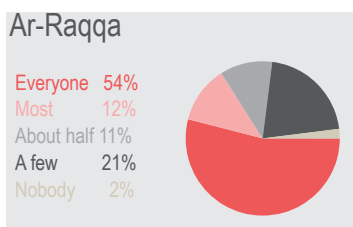

Proportion of residents who reported to be aware of COVID-19

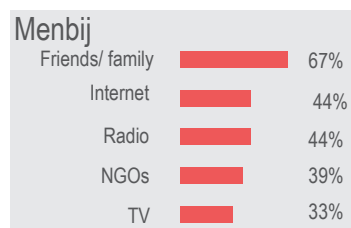

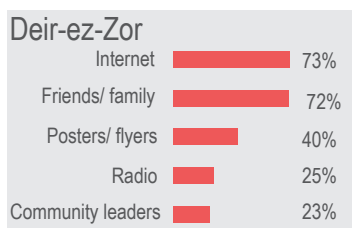

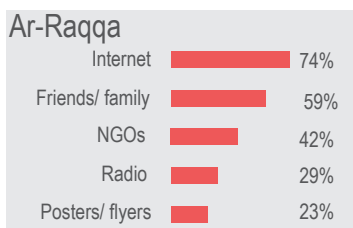

Proportion of residents who reportedly consider COVID-19 an important issue

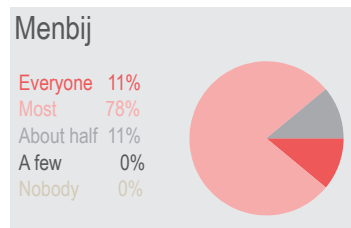

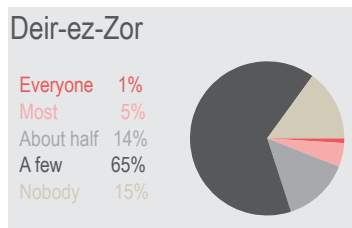

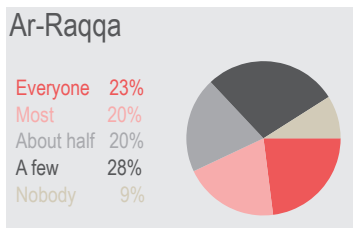

Proportion of residents who have reportedly received information on COVID-19

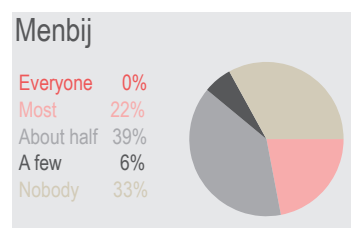

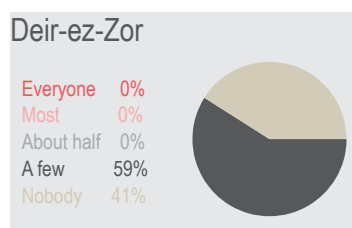

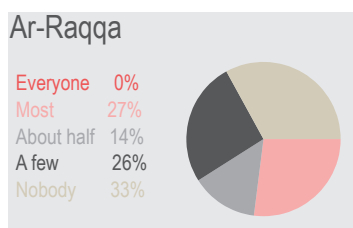

Reported modalities in which information was received*

Reported proportion of residents aware of social distancing

Reported proportion of residents engaging in social distancing

Informal Site and Settlement Profiles

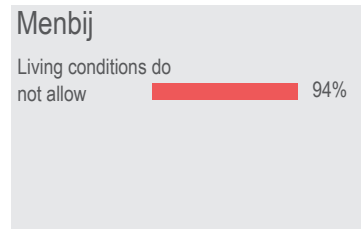

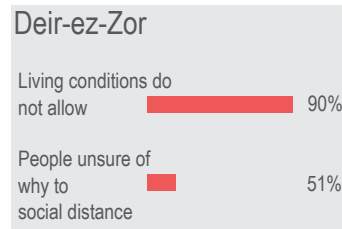

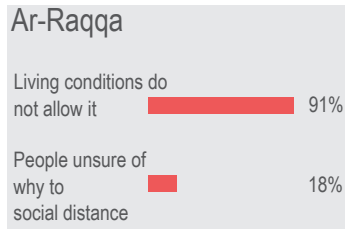

Ar-Raqqa, Deir-ez-Zor, and Menbij, Syria

June 2020

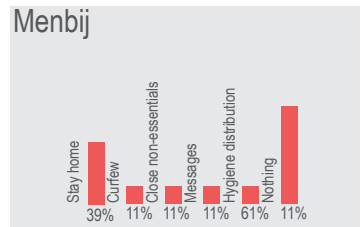

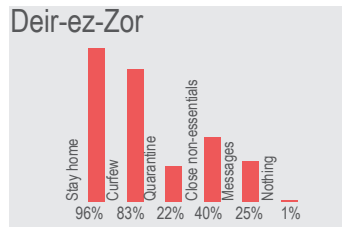

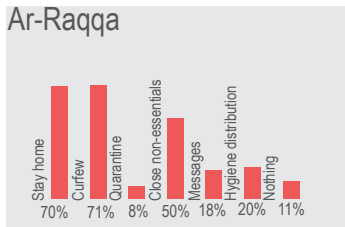

Key Findings - COVID-19 Vulnerability

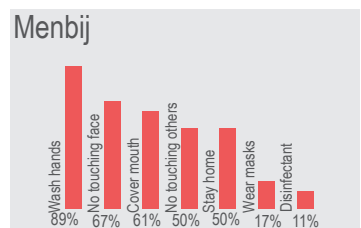

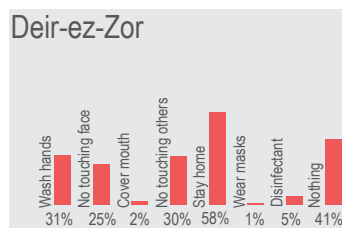

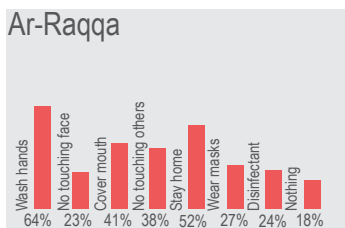

Reported issues related to social distancing*

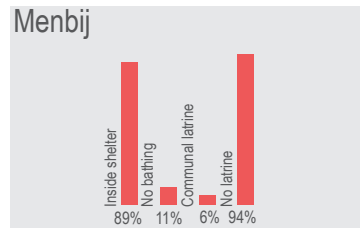

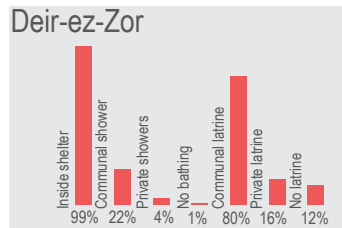

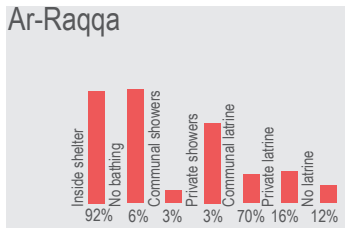

Measures reportedly implemented by local authorities to protect against COVID-19*

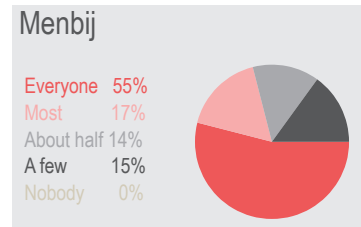

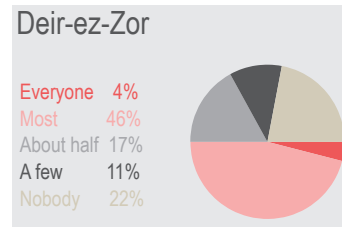

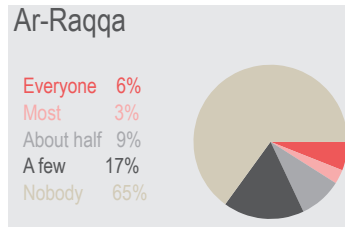

Measures reportedly implemented by residents to protect themselves from COVID-19*

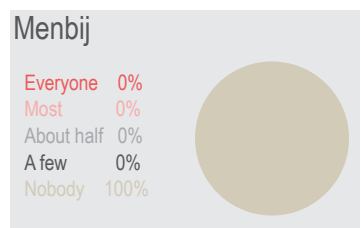

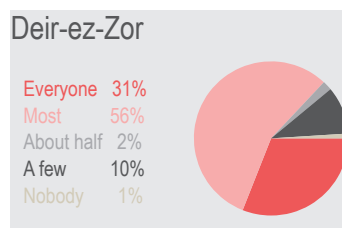

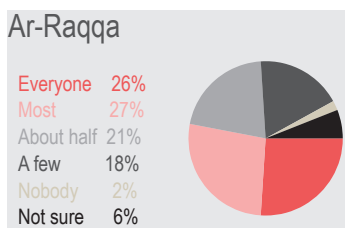

Reported types of bathing facilities and latrines residents had access to within the assessed settlements*

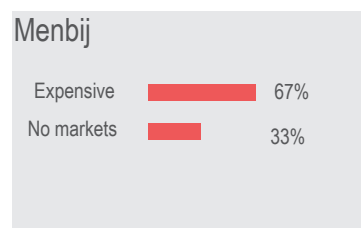

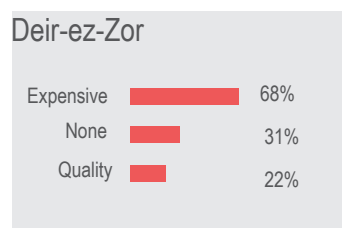

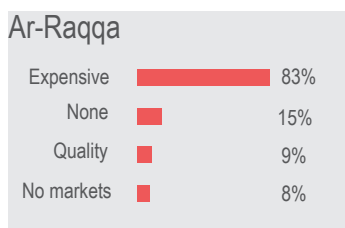

Reported proportion of residents with access to handwashing facilities within the assessed settlements

Reported proportion of residents with access to soap within the assessed settlements

Reported issues with soap for residents within assessed settlements*

*Questions where KIs had multiple answer options (total may be >100%). Due to rounding, percentages may not always add up to 100%.

Informal Site and Settlement Profiles

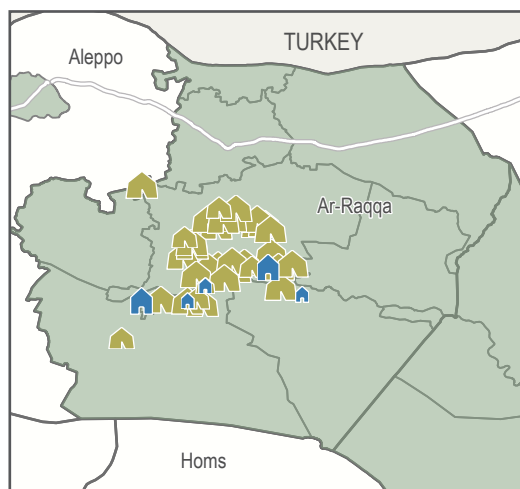

Ar-Raqqa, Deir-ez-Zor, and Menbij, Syria

June 2020

Area Overviews

Ar-Raqqa | Area Overview Ar-Raqqa Profiles pp. [16-48](#)

Assessed settlements: 66

Estimated population in assessed settlements: 55,473

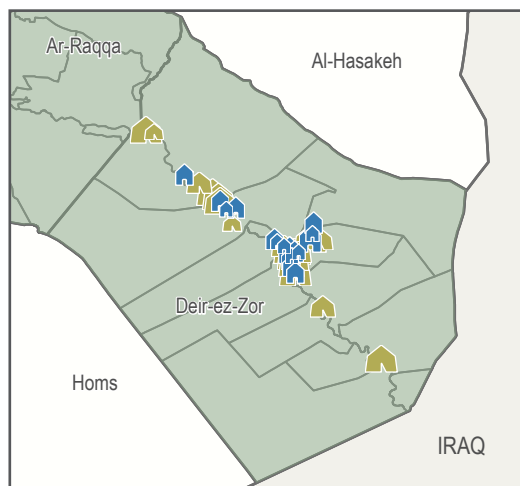

In **65%** of assessed settlements, it was reported that nobody had access to handwashing facilities.

In assessed settlements, people over 60 years old were estimated to comprise **12%** of the population of the population.

In **91%** of assessed settlements, living conditions did not allow for social distancing.

In **15%** of assessed settlements, there was no access to health facilities.

Deir-ez-Zor | Area Overview Deir-ez-Zor Profiles pp. [49-89](#)

Assessed settlements: 83

Estimated population in assessed settlements: 22,746

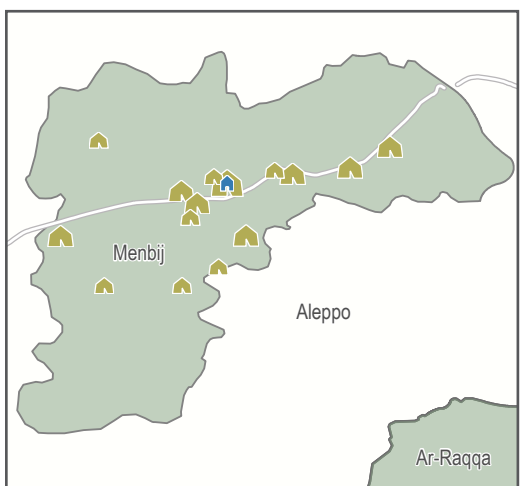

In **22%** of assessed settlements, nobody had access to handwashing facilities.

In assessed settlements, people over 60 years old were estimated to comprise **10%** of the population of the population.

In **90%** of assessed settlements, living conditions did not allow for social distancing.

In **25%** of assessed settlements, there was no access to health facilities.

Menbij | Area Overview Menbij Profiles pp. [7-15](#)

Assessed settlements: 18

Estimated population in assessed settlements: 2,231

In **100%** of assessed settlements, nobody had access to handwashing facilities.

In assessed settlements, people over 60 years old were estimated to comprise **11%** of the population.

In **94%** of assessed settlements, living conditions did not allow for social distancing.

In **28%** of assessed settlements, there was no access to health facilities.

About REACH Initiative

REACH Initiative facilitates the development of information tools and products that enhance the capacity of aid actors to make evidence-based decisions in emergency, recovery and development contexts. The methodologies used by REACH include primary data collection and in-depth analysis, and all activities are conducted through inter-agency aid coordination mechanisms. REACH is a joint initiative of IMPACT Initiatives, ACTED and the United Nations Institute for Training and Research - Operational Satellite Applications Programme (UNITAR-UNOSAT).

About REACH's COVID-19 response

As an initiative deployed in many vulnerable and crisis-affected countries, REACH is deeply concerned by the devastating impact the COVID-19 pandemic may have on the millions of affected people we seek to serve. REACH is currently working with Cash Working Groups and partners to scale up its programming in response to this pandemic, with the goal of identifying practical ways to inform humanitarian responses in the countries where we operate. Updates regarding REACH's response to COVID-19 can be found in [a devoted thread](#) on the REACH website. Contact geneva@impact-initiatives.org for further information.
